B.S., University of Maryland, 1994

Brian is Team Lead of the U.S. Environmental Protection Agency's Landfill Methane Outreach Program (LMOP), a voluntary program that encourages methane emissions reductions through the capture and beneficial use of landfill gas.

Brian's primary roles are to manage Territory 3 and LMOP's international activities. Brian works to create alliances between the LMOP and states, energy users and suppliers, landfill owners and operators, communities, and the landfill gas industry. Brian also assists project development by helping landfills find beneficial end uses for the landfill gas, and by providing technical and marketing assistance at all stages of the development process. In addition to his territory activities, Brian works to facilitate LFGE projects throughout the world by working with national governments, multinational banks, NGOs, and the private sector.

Brian has been with LMOP since May 1999. Prior to joining LMOP, Brian was Technical Divisions Manager for the Solid Waste Association of North America (SWANA) since 1994. He was responsible for coordination and oversight of activities for SWANA's seven Technical Divisions, including regulatory and legislative analysis, delivery of specialty symposia, awards programs, newsletter production, and management of two program managers and interns.
